

Track'Em™

Barcode Tracking System for Assets and Inventory

Track'Em™ is an inventory and asset tracking system developed using a Microsoft Access database. Track'Em provides all of the tools necessary to manage all of your company's assets (things with different numbers like serial numbers on PC's) and inventory (things with the same number like cases of copy paper). Track'Em allows you to scan a barcode at any point (i.e. – receiving, material movement, shipping, etc.) and print reports showing current inventory levels and locations. You can also use Track'Em to track anything by location, person, project, event, category, status, department, date, etc. Track'Em can be run on a stand-alone PC or over a LAN for one low price – no need to purchase additional user licenses. Connect as many scanners as you need.

Track'Em Standard is provided with the portable barcode scanner shown. Track'Em Lite is provided with a corded barcode scanner. Both versions come with the Track'Em database system, 500 pre-printed barcode labels and 30 days of free telephone support.

Portable Scanner Asset Data Screen

Track'Em - Checked Out by Location Report					
Barcode	Description	Category	Date Last Checked Out	Due Date	
Location	/	LOCATION 1			
11111	22222		30/02/00	4/10/00	
Total Checked Out by Location					1

Track'Em - Asset History by Location Report					
Asset	Description	Status Code	Date	From Scanner	Used
1003	CONFERENCE ROOM				
100001	17 LCD Monitor	100	IN SERVICE	10 Jun 05	<input type="checkbox"/>
Count per Location					1

Track'Em - Product Reorder Report				
Product Number	Short Description	Barcode	Recorder Qty	On Hand
240	HIT TEST	240	500	57

Sample reports

Track'Em includes all of these powerful features:

- Easily import / export data to EXCEL or text files
- Customize forms and reports using MS Access tools. Customize and password protect the menu system using the tools provided.
- Track any uniquely numbered item such as books, tools, equipment, furniture (i.e. - items with different barcode number)
- Track on-hand inventory (i.e. – items with same barcode number) with receiving, material movement, and shipping forms.
- Print basic Code 39 barcode labels on your office printer for items, assets and locations without having to purchase any additional software. Create and print complex barcode labels containing Track'Em database information by purchasing the Deluxe Add-On modules (Seagull Scientific's Bartender Label Design and Print software - Professional or Enterprise versions)
- Store inventory in multiple locations without any problems. Add unlimited records to database.
- The Check In / Check Out module makes the job of finding assets easy.

When material is received, Track'Em adds the quantity to the inventory table and writes a history record. When inventory is used, Track'Em subtracts the amount from inventory and also writes a history record. When an asset is moved or checked in / out, the asset's current status record is modified and a history record is created. All of this is automatic so you can conduct your business, not worry about your tracking system. Track'Em is provided with dozens of reports formatted to display the the history tables, the current inventory table, the asset table as well as many other types of tables. You can view data by date range, location, category, status, etc.

The portable scanner is provided with a rechargeable battery, communications cable and recharger. Once data is entered into the scanner, the Track'Em database is automatically updated once the scanner is connected and you click the "UPLOAD DATA" button located in the Track'Em menus.

Track'Em™ TECHNICAL SPECS

Minimum PC Requirements:

- Windows 95 or above
- 10 MB Hard Disk Space
- 128k memory
- 9 pin RS-232 COM serial port or USB

MS Access Database:

- MS Access 2003 or above required
(NOTE: **FREE Runtime Version of Access 2003 provided with Track'Em™**)
- Password protected menu system
- Dozens of reports, or create your own
